

What does China's new power grid plan mean for China?

It will mark an attempt to further ensure power supply stability and boost green power consumption in the country. State Grid Corp of China, the country's largest State-owned utility, plans to invest 501.2 billion yuan (\$79 billion) in domestic grid network construction this year, up nearly 9 percent year-on-year and an all-time high.

What is China's State Grid?

China's State Grid, one of the country's two grid operators, proposed the technology to the government in 2004 to connect the country's hydro and coal power stations with the economic hubs that gobbled electricity hundreds of miles away.

Why is China investing 90 billion yuan to speed up grid construction?

State Grid Corp of China said it will invest 90 billion yuan (\$13.46 billion) to speed up urban power grid network construction this year. The attempt is meant to further ensure a steady power supply amid the upcoming summer demand peak in the country, said the Beijing-based State-owned enterprise.

Will China build a global power grid?

The technology acts as a key component in China's proposal to build a global power grid, known as the Global Energy Interconnection. The idea - announced by China's president Xi Jinping at a United Nations summit in 2015 - is to link up national grids over the next three decades.

Is China's State Grid the world's largest smart internet of vehicles?

Over the years, State Grid has built the world's largest smart internet of vehicles architecture in China, connecting more than 1.4 million charging piles nationwide and serving about 9.3 million new energy car owners, he said.

What will China do with UHV lines in 2022?

As China has accelerated its renewable energy deployment, the mission for UHV lines has changed. In 2022, the country's National Energy Administration said desert-based wind and solar bases should plan transmission lines to bring out their electricity to towns and cities on the other side of the country.
