

Illustrated tutorial on installing photovoltaic panels on tile roofs

How to install solar panels on tile roof?

The aluminium-alloy brackets are bolted to the brackets across the roof. The rails serve as a contact point for solar panels. Now that the preparatory work is done, it is time for installing solar panels on tile roof. Specially designed clips are used for the attachment of solar panels to rails. These clips bolt onto the edges of the solar panel.

Should a tile roof be inspected before installing solar panels?

Assessing the condition of your tile roof before installing solar panels is critical to ensure the longevity of both your roof and solar system. Any existing damage, such as cracked or broken tiles, should be repaired or replaced. This not only prevents potential leaks but also provides a solid foundation for the solar panel mounting system.

Can I install a PV system on a tiled roof?

Both systems are available as top-fix and side-fix. In short: the mounting of the rail system on the tiled roof can be done from above as well as from the side. But no matter which of our pitched roof mounting systems for installing a PV system on a tiled or plain tile roof you choose: all systems are particularly easy and efficient to install.

Can solar panels be installed on a roof?

Solar panels require a certain amount of space for installation. If your roof is small or has limited space due to architectural features, it may not be suitable for solar panels. It's important to consult with a solar energy expert to assess your roof's suitability for installing solar panels.

Can photovoltaic panels be installed on a building roof?

The installation of photovoltaic panels on a building roof or integral with a building roof also raises other code issues (e.g., roof loading, wind loading, fire ratings, weather tightness, mounting systems, roof penetrations, etc.), which may also be relevant for systems mounted on or integral to a wall.

How are solar panels installed?

Once the mounting system and flashing are in place, the solar panels are installed on the roof. Installers carefully place the panels to ensure they are properly aligned and securely attached to the mounting system. The panels are then wired together and connected to the electrical system of the home.
