

Indonesia Solar Energy Outlook 2025 highlights the crucial role of solar power in improving Indonesia's energy security. The report analyzes how solar PV can help reduce dependence on fossil energy, improve the reliability of electricity supply, ...

Presiden Indonesia SolarHub adalah portal bagi calon pengguna PLTS Atap untuk mencari informasi tentang energi surya dan terhubung dengan penyedia jasa PLTS Atap. SolarHub merupakan inisiatif Institute for Essential Services Reform.

Through Solar Revolution Hub, IESR is working to engage other potential partners, develop a platform for solar PV marketplace, create solar initiatives, and identify suitable financing mechanisms for solar deployment, both for large-scale and rooftop solar application.

Indonesia's PT Calypte Sugi Power has attracted Singapore's Aslan Energy Capital as a development partner for a project to build a clean energy hub at home with a solar power production capacity of 2 GW.

Solarhub is an online platform, providing essential information about solar PV and its development in Indonesia. Solarhub enables people to evaluate your rooftop solar PV potential and connect people to the nearest solar system provider. Solarhub.id aims to provide access to stimulate the deployment of solar photovoltaic through an online platform.

The capacity of solar energy in Indonesia is steadily climbing. With total capacity reaching over 322.6 MW as of the first half of 2023, this is an increase of over 800% in the last 10 years. This progress is part of Indonesia's solar energy plan, which targets 5 GW of installed capacity by 2030.
