

Will Indonesia add more solar power by 2033?

According to IESR, Indonesia's state electricity company, PLN, plans to increase renewable energy generation by adding 7.9 GW of solar capacity by 2033. Additionally, policy changes from the Ministry of Energy and Mineral Resources are expected to add over 5 GW of rooftop solar capacity within five years.

What is Indonesia's solar energy capacity?

The capacity of solar energy in Indonesia is steadily climbing. With total capacity reaching over 322.6 MW as of the first half of 2023, this is an increase of over 800% in the last 10 years. This progress is part of Indonesia's solar energy plan, which targets 5 GW of installed capacity by 2030.

What is Indonesia's solar energy plan?

This progress is part of Indonesia's solar energy plan, which targets 5 GW of installed capacity by 2030. The growth of solar power in Indonesia reflects not just a commitment to shift away from its fossil fuel-dominated energy system but also recognises the immense potential the solar energy holds in the Indonesian archipelago.

Can solar power improve Indonesia's energy security?

Indonesia Solar Energy Outlook 2025 highlights the crucial role of solar power in improving Indonesia's energy security. The report analyzes how solar PV can help reduce dependence on fossil energy, improve the reliability of electricity supply, and address the challenges of climate change.

Will solar PV fuel Indonesia's energy transition?

The emergence of solar PV in fueling Indonesia's energy transition ISEO 2023 provides an update on the progress of solar PV as the primary energy source in Indonesia's energy transition, as well as its challenges and market opportunities.

Can Indonesia harness solar energy?

While solar energy capacity is increasing in Indonesia, the current installed capacity is just a fraction of the potential capacity of solar power development. As a nation that straddles the equator, it gets direct, high-intensity solar irradiance, putting it in an ideal position to harness solar energy.

To date, with the supports from GEI, IESR has completed a GIS-based nationwide solar PV technical potential assessment in Indonesia. The assessment report is produced to provide detailed information for related stakeholders in identifying prospective locations for solar power plants at any scale, feeding energy planners and driving more ...

ISEO 2023 provides an update on the progress of solar PV as the primary energy source in Indonesia's energy transition, as well as its challenges and market opportunities. Previously, solar progress was included in the IESR's annual flagship report Indonesia Energy Transition Outlook (IETO), but this year we made it into a separate publication.

1 ???&#0183; With an average solar irradiance exceeding 4.8kWh per square meter per day and abundant sunshine throughout the year, Indonesia has the capability to generate between 7.7 to 20TW of solar power.

ISEO 2023 provides an update on the progress of solar PV as the primary energy source in Indonesia's energy transition, as well as its challenges and market opportunities. Previously, solar progress was included in the IESR's annual ...

With a potential capacity of 32.5 GW, Indonesia's rooftop solar PV, as of June 2023, produces up to 95 MW, with the household sector accounting for 72% of the share. The electricity consumption in Indonesia has ...

Indonesia Solar Energy Outlook 2025 highlights the crucial role of solar power in improving Indonesia's energy security. The report analyzes how solar PV can help reduce dependence on fossil energy, improve the reliability of electricity supply, ...

Indonesia Solar Energy Outlook 2025 highlights the crucial role of solar power in improving Indonesia's energy security. The report analyzes how solar PV can help reduce dependence on fossil energy, improve the reliability of electricity ...

We estimate that electricity consumption in Indonesia could reach 9000 terawatt-hours per year by 2050, which is 30 times larger than at present. Indonesia has abundant space to deploy enough solar to meet this requirement, including on rooftops, inland reservoirs, mining wasteland, and in combination with agriculture.

According to IESR, Indonesia's state electricity company, PLN, plans to increase renewable energy generation by adding 7.9 GW of solar capacity by 2033. Additionally, policy changes from the Ministry of Energy and Mineral Resources are expected to add over 5 GW of rooftop solar capacity within five years.
