

What is Jamaica's energy source?

This page is part of Global Energy Monitor 's Latin America Energy Portal. Oil and natural gas continue to supply most of Jamaica's energy, supplemented by significantly smaller contributions from renewables. As of 2020, nearly 89% of electricity was still generated by fossil fuels.

Who regulates electricity in Jamaica?

MSET (Ministry of Science, Energy, and Technology) is the government institution responsible for energy. NEPA (National Environment and Planning Agency) is responsible for permitting and tracking all environmental impact assessments. OUR (Office of Utility Regulators) is responsible for regulating Jamaica's electrical sector.

Is Jamaica following the National Energy Policy 2009-2030?

Jamaica is currently following the National Energy Policy 2009-2030. Jamaica's December 2020 update to its NDC (Nationally Determined Contribution) aims to reduce greenhouse gas emissions by more than 25% relative to business as usual levels by 2030, with the majority of reductions coming from the energy sector.

Is biomass a source of electricity in Jamaica?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Jamaica: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

How much electricity does Jamaica have?

As of 2020, Jamaica's installed electrical capacity was 1156 MW, supplied primarily by fossil fuels (83.73%), followed by wind (8.82%), solar (4.93%) and hydro power (2.52%).

What percentage of Jamaica's electricity is lost?

More than a quarter (26.5%) of Jamaica's electrical output is lost through poor transmission and distribution infrastructure. In 2018, the peak demand was 655 MW, and 97% of the population had access to electricity. In 2016, Jamaica consumed 2.847 billion kWh. Jamaica has no coal reserves and does not produce coal.

This document was developed by the National Renewable Energy Laboratory with support provided by the Caribbean Center for Renewable Energy and Energy Efficiency. The information included in this document is for general information purposes only.

In 2020, Jamaica generated 4767 GWh of electricity; fossil fuels were the main energy source (88.67%), supplemented by smaller contributions from wind (5.87%), hydro (2.85%), and solar power (2.60%). More than a quarter (26.5%) of Jamaica's electrical output is lost through poor transmission and distribution infrastructure.

Jamaica: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

The purpose of ENCORE is to increase Jamaica's resilience through a strengthened energy sector delivering more renewable and reliable energy to more people, including marginalized populations.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided
