

New Jersey is proposing upfront and performance-based financial incentives for grid-connected and behind-the-meter energy storage systems beginning next year, the state's public utility regulator said Nov. 12.

Energy Storage Incentive Program ("NJ SIP") (the "Straw"). PSE& G strongly supports the State's goals of increasing the resilience of New Jersey's electric grid, reducing carbon emissions, and enabling New Jersey's transition to 100% clean

Utility ownership of energy storage investments enables more applications and overall value to be achieved from the energy storage investment. Whereas a storage developer would deploy storage only to maximize returns across wholesale market services (e.g., energy, ancillary services and capacity), a Utility can additionally use energy storage ...

New Jersey is proposing upfront and performance-based financial incentives for grid-connected and behind-the-meter energy storage systems beginning next year, the state's public utility ...

The New Jersey Storage Incentive Program could provide up to \$400/kWh in initial benefits for eligible behind-the-meter storage systems, the public utility board said Nov. 12.

New Jersey is determined to build an effective, long-term energy storage that would bolster electric grid reliability and clean energy transition. The state has a statutory mandate to achieve 600 megawatts (MW) of installed ...

Energy storage resources are critical to bolstering the resilience of New Jersey's electric grid, reducing carbon emissions, and enabling New Jersey's transition to 100% clean energy.

Energy efficiency is the easiest, most cost-effective way to reduce energy use and hence, reduce criteria pollutant emissions and greenhouse gases. The results for New Jersey are a stronger economy, less pollution, lower costs, and reduced demand for electricity.

New Jersey has a statutory mandate to achieve 600 megawatts ("MW") of installed energy storage by 2021, growing to 2,000 MW by 2030. In the NJSIP Straw Proposal, NJBPU staff propose to create two energy storage segments for Front-of-Meter and Behind-the-Meter energy storage incentives, patterned after the Board's Successor Solar Incentive ...

The State of New Jersey has one of the most ambitious storage targets in the nation, with a statutory mandate to achieve 2,000 megawatts ("MW") of installed energy storage by 2030. Energy storage resources are critical to increasing the resilience of New Jersey's electric grid, reducing carbon emissions, and enabling New

Jersey"s ...

The New Jersey Board of Public Utilities (NJBPU) released the 2024 New Jersey Energy Storage Incentive Program Straw Proposal, the foundation for a long-term energy storage effort in the state.
