

What is JinkoSolar photovoltaic (PV) installation manual?

Thanks for choosing JinKoSolar photovoltaic (PV) modules (hereafter referred to as "modules"). This manual provides important safety guidelines for the installation, maintenance, and use of the modules. To ensure correct installation and stable power output, it is necessary to read and understand all installation instructions before proceeding.

What is a roof-mounted solar panel installation?

Roof-mount solar panel installations are less intrusive and invasive, and there is no need for extensive pre- and post-installation work or construction. Roof-mounted solar panels add aesthetic appeal and blend seamlessly with roofs, making them ideal for residential rooftop surfaces.

How to wire a Jinko Solar module?

JinkoSolar recommends the following wiring methods (see Table 9). - When wiring modules, always keep in mind the minimum bend radius (see Figure 7). This minimum bend radius is the permissible curvature the cable can be bent around. Depending on the type of cable, a specific coefficient (Cable multiplier), must be applied.

How are solar panels affixed to my property?

Your solar array will be affixed to your property using racking and mounting systems. Rooftop solar panel systems will have a fixed mount system, keeping the panels stationary on your roof. All rooftop mounting systems serve the same functional purpose but can differ in how they're installed.

What are the installation requirements for Jinko Solar?

Thermal expansion and contraction effects occur on the modules. During installation, the distance between two adjacent modules must be $\geq 10\text{mm}$. If there are special requirements, please confirm with JinKoSolar before installation. 60N. Do not dispose of electrical appliances as unsorted municipal waste, use separate collection facilities.

What is Jinko Solar module fire rating?

JinKoSolar modules fire rating is set according to IEC61730-2:2023 standard, and it can be found in the corresponding certificates. The Fire Class Rating of a module for roof mounted system shall meet local code requirements in order to achieve the specified System Fire Class Rating for a non-BIPV module.
