

Does North Korea need solar power?

North Korea is increasingly turning to solar power to help meet its energy needs, as the isolated regime seeks to reduce its dependence on imported fossil fuels amid chronic power shortages.

What type of power is used in North Korea?

Hydropower is the dominant form of electricity generation in North Korea. The country's numerous mountains and rivers make it an attractive choice for power generation. As noted in article one of this series, Statistics Korea estimates it accounted for 53 percent of all power generation, while Nautilus Institute put hydro at 76 percent.

What are North Korea's recent power station projects?

In the next installments, we will examine some of North Korea's recent power station projects, including the Orangchon Power Station, which was recently completed after 40 years of work, and North Korea's latest policy of small-scale hydro stations to serve local communities.

When did North Korea start implementing small- and medium-sized power plants?

In the meantime, North Korea began instituting a new system of small- and medium-sized power plants in 2000. The scheme was intended to meet electricity demands in small factories and homes.
