

Battery electricity storage is a key technology in the world's transition to a sustainable energy system. Battery systems can support a wide range of services needed for the transition, from providing frequency response, reserve capacity, black-start capability and other grid services, to storing power in electric vehicles, upgrading mini-grids and supporting "self-consumption" of ...

In contrast, the revised Renewable Energy Directive[3] aims to strengthen the self-consumption of renewable energy and the role of renewable energy communities. In Latvia, the provisions of the directives will mainly be transposed by the already mentioned amendments to the Energy Law and the Electricity Market Law.

Thanks to the expansion of renewable energy sources, notably bioenergy and wind, the carbon intensity of the power and heat sector has decreased over the past decade. ... the Baltic gas storage in Latvia (Incukalns) with Estonia's and Finland's gas network through the Balticconnector pipeline, and with Poland through the Gas ...

On November 1 Latvia's largest wind energy producer Utilitas Wind opened the first utility-scale battery energy storage battery system in Latvia with a total power of 10 MW and capacity of 20 MWh in Targale, Ventpils region.

On the other hand, renewable energy sources have gained significantly in importance in Latvia since 1990. The largest share is accounted for by biofuels and waste, which accounted for 8.69% of the total energy supply in 1990 and whose share has increased to 38.55% by 2019 - making them now the most important source of energy in Latvia, ahead of the ...

Energy security is guaranteed by access to regional LNG facilities and large inland storage capacity, as well as the promotion of renewable energy sources. oLatvia's membership of NATO provides it with a proven security umbrella which has been strengthened since 2022 with new troops-on-the-ground and technology

Energy storage is key to secure constant renewable energy supply to power systems - even when the sun does not shine, and the wind does not blow. Energy storage provides a solution to achieve flexibility, enhance grid reliability and power quality, and accommodate the scale-up of renewable energy. But most of the energy storage systems ...

The REPowerEU plan (REPowerEU, 2023), an initiative by the European Union (EU) to reduce reliance on Russian fossil fuels, places significant emphasis on the rapid deployment of renewable energy and PV systems. As a result, renewable energy has become more competitive with fossil fuels in terms of electricity generation costs. When energy ...

it, preferably all the energy should be produced by using renewable energy sources, but there has always been

a challenge for storage of renewable energy. Therefore, considering technical and economical parameters, construction options for a pumped storage hydropower plant in Latvia have been evaluated using the desk research methodology.

The economical side of the storage of (renewable) energy is mainly regulated by the EIWOG and the GWG. While the EIWOG governs, e.g., the rights and obligations of electricity market participants (including storage ...

to regional LNG facilities and large inland gas storage capacity, as well as the promotion of renewable energy sources. oLatvia's membership of NATO provides it with a proven security umbrella which has been strengthened since 2022 with new troops-on-the-ground and technology agreements reached during the 2022 NATO summit in Madrid.

Latvia has already made inroads on the share of renewable energy in its fuel mix, with sizeable shares of bioenergy and hydropower. Renewable energy sources dominate its electricity mix, accounting for around three-quarters of domestic ...

Water tanks in buildings are simple examples of thermal energy storage systems. On a much grander scale, Finnish energy company Vantaa is building what it says will be the world's largest thermal energy storage ...

From the compact lithium-ion battery powering your e-bike to colossal grid-scale solutions that can keep entire neighbourhoods humming, energy storage is the secret sauce making renewable energy reliable around the clock.

Estonian renewable power and heat producer Utilitas has inaugurated the first utility-scale battery energy storage system (BESS) in Latvia, a 10-MW/20-MWh facility. ... Renewables Now is a leading business news source for renewable energy professionals globally. Trust us for comprehensive coverage of major deals, projects and industry trends ...

A new LNG terminal is being planned in Latvia. An international group of investors is ready to commit EUR150m (US\$163m) in a floating regasification unit in the Skulte Port area, 2.5 km offshore off the coast, with a 34-km pipeline connection to the vast Incukalna underground gas storage facility.
