

What is a lithium ion battery backup system?

Lithium-Ion UPS battery backup systems are designed to provide twice the life expectancy of traditional VRLA batteries. Through fewer battery replacements, ability to withstand higher temperatures, and quick recharge cycles, these systems are ideal for protecting your critical infrastructure in edge or distributed IT environments. Now Available!

Should you buy a lithium-ion UPS system?

Taking into consideration the initial investment of a VRLA system in addition to the battery replacements and services that aren't needed with lithium-ion UPS, you are able to reduce your total cost of ownership of your UPS system by 50%. The life expectancy of a Lithium-Ion UPS is 8-10 years, which is 4x longer than comparable VRLA systems.

Are lithium-ion batteries a good choice for energy storage devices?

With regard to system integration and economy (TCO), energy storage devices with space and weight savings of up to 75% can be realized with Lithium-Ion cells compared to conventional lead-acid batteries. Lithium is the lightest metal in the periodic table and has ideal electrochemical properties for providing high specific energy densities (Wh/kg).
