

The meeting was part of a national consultation process on the development of renewable energy in Luxembourg, which was initiated a few months ago. This process began with a series of interviews with key players in the energy sector as well as representatives of volunteer associations, allowing to gather various points of view and to identify ...

This would help Luxembourg to fulfill its national commitment of 25% of energy being from a renewable source by 2030, as required by the Renewable Energy Directive. This target could ...

Luxembourg has generous support programmes for energy efficiency and renewable energy, two of the pillars of clean energy transitions. However, the IEA report finds that the country's low taxes on energy represent a barrier to the investments needed in energy efficiency and renewables to meet the government's targets.

SummaryRenewable energyOverviewElectricityClimate changeSee alsoBy 2021, renewable energy produced 80% of electricity generated in Luxembourg, comprising wind power at 26%, solar power at 17%, hydro power at 8%, and other renewables (bioenergy, etc) at 29%. Luxembourg firms are less likely than those throughout the EU to invest in onsite/offsite renewable energy generation (26% versus 41%) and energy effi...

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included.

Luxembourg closed the renewable energy ranking together with Hungary and Cyprus. Only Malta consumed less renewable energy, which made up just 8% of overall consumption. This compares to leader Austria, where 75% of all electricity came from renewable sources, with Sweden (71%), Denmark (65%), Portugal (54%) and Latvia (53%) also in the top ...

The wooden constructions were built with solid wood panels and wood fibre boards, with cellulose and sheep wool insulation (especially for the roof). Even the lift shaft, which connects the three floors of the common area, is made of wood!Wood, a recyclable and renewable material, has a low "grey energy", as it consumes little energy during its production and it allows to store CO2.

Renewable energies are still on the rise within the European Union, which has set the goal for green energy to reach 32% of energy usage by 2030.. In the face of this major goal, Luxembourg is strengthening some of the measures of its National Energy and Climate Plan, which it has just sent to the European Commission.This blueprint describes the policies and measures in place ...
