

Do you need a backup power generator?

Proper home maintenance is all about planning and preparation. Given the uptick in extreme weather, that may mean investing in a backup power generator to keep your home running in the event of disaster or an extended power outage.

How does a backup power generator work?

Backup power generators provide electricity to the home with the use of two main components: a gas- or battery-powered engine that turns an on-board alternator to generate alternating current (AC) electrical power.

What generators do you need for a power outage?

A one-time roofer and a serial remodeler, Dan can often be found keeping house at his restored Brooklyn brownstone, where he lives with his wife and kids. During a power outage, a reliable generator from a leading brand like Generac, Kohler and Craftsman will keep your home running and loved ones safe.

Can You Back feed a generator?

Don't back feed power into your home. Backfeeding refers to the practice of plugging your generator directly into an outlet in your home. It's dangerous and often illegal because it causes unfiltered electricity to flow through circuits, which can electrocute workers on nearby power lines or overload your devices and appliances.

Can a solar generator be used as a backup power source?

Solar generators work well as a home backup power source. Your solar panels keep the generator powered, so there's no need to purchase fuel. You can store them inside, and they're often relatively compact. And they're better for the environment than a gas generator.

Is a whole-house generator better than a portable generator?

Learn more. Whole-house generators are more expensive than portables, but they provide convenient backup power, allowing you to get through outages and weather emergencies with less trouble.
