

What is the progress made in solar power generation by PV technology?

**Highlights** This paper reviews the progress made in solar power generation by PV technology. Performance of solar PV array is strongly dependent on operating conditions. Manufacturing cost of solar power is still high as compared to conventional power. **Abstract**

What is MPP in a photovoltaic array?

the normal operating circuit current.  $MPP = \text{maximum power point}$ - This relates to the point where the power supplied by the array that is connected to the load (batteries, inverters) is at its maximum value, where  $MPP = I_{mp} \times V_{mp}$ . The maximum power point of a photovoltaic array is

What factors affect the performance of a solar PV array?

The performance of the solar PV array is strongly dependent on operating conditions and field factors, such as sun geometric locations, its irradiation levels of the sun and the ambient temperature. A cloud passing over a portion of solar cells or a sub module will reduce the total output power of solar PV arrays.
