

How much energy does Burundi use?

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries.

What are the energy planning strategies for Burundi?

Energy Planning Strategies for Burundi The Burundian energy supply highly depends on traditional use of biomass. The literature shows that the power supply of this country mainly relies on hydropower generation. Many hydropower projects are under development to increase the electricity access of this country.

How does metworld operate in Ivory Coast?

Metworld operates in Ivory Coast media spectrum through its subsidiary, CDML. The company publishes *PepeSoupe*, a French language newspaper covering the length and breadth of the country. Metworld operates in the pharmaceutical and healthcare sector through its associate company Magbro.

Why is energy demand increasing in Burundi?

Limited capability and resources to improve energy efficiency are also the main factors contributing to the increase of Burundian energy demand. Incorporating these factors into energy demand forecasts is crucial for a capital constrained developing country, like Burundi, where reliable energy supply capability is limited. 4.2.

Why is Burundi lagging in energy supply?

Despite some efforts in the region to increase energy supply at national and regional levels, Burundi is lagging from meeting its total power demand: 10% of its population had access to electricity in 2012, this access rate has only turned to 11% in 2019 according to World Bank data.

What is Burundi's main energy source?

Its most important power source is hydroelectric power, representing 95% of total production. It also uses energy from other renewable (wind, solar, biomass, and geothermal) and coal power plants. Burundi has the world's lowest carbon footprint per capita at 0.027 tons per capita in CO₂ emissions as of 2019.

A particular emphasis is made on Burundi due to its poor energy access with a highest dependence on traditional use of biomass energy in the region. Hence, this article aimed at identifying the status and gaps of sustainable planning of Burundian energy sector in EAC.
