

MidNite offers a full line of pre-wired, battery based systems for standalone off grid, battery based grid tie, as well as AC coupled battery backup installations. MidNite Solar is an innovative manufacturing company that started by making ...

Evergen has worked to find definitive answers to the big questions in solar power and batteries for the home and commercial environment. Now, with an Evergen enabled system, we can dramatically reduce energy costs and carbon emissions for homeowners and businesses using their world class energy intelligence software.

Our installer initially installed our system and the Midnight Sun Kid with a certain set of settings (float to 13.5, absorption to 14.4, absorption time to 3 hours). He said these were &quot;conservative&quot; numbers because he had to look ...

This week, a letter from our installers has been received about the Midnight Sun solar capture system. Basically a big gel battery system from what I can gather. Does anyone have any experience of this system at all as prices are not quoted anywhere that I ...

A battery system allows you to go even further by storing surplus solar generation for use at any time, increasing your savings and providing additional backup power in case of a blackout. Midnight Sun offers homeowners complete energy storage systems that meet the needs of a wide range of building types and demand profiles.

I see ForkLift battery recommendations here and other places but, I must be missing something as I just don't see them being matched to solar PV systems very well. They also seem to be excessively heavy and relatively expensive. Are they a more reasonable battery option than they initially seem to me?

MidNite offers a full line of pre-wired, battery based systems for standalone off grid, battery based grid tie, as well as AC coupled battery backup installations. MidNite Solar is an innovative manufacturing company that started by making high quality, cost effective AC and DC disconnect boxes for the alternative energy industry.

For my money, it's going to be a relatively small system that trickle feeds a few hundred watts back in through the evening and night to cover base load that hits that economic point first - it should have the advantage of maximising battery life by limiting the draw off rate, and not dropping too far down the charge on the battery.
