

What are Eaton supercapacitor module cabinets?

Eaton's supercapacitor module cabinets are highly reliable and flexible energy storage solutions that provide fast responding very high peak power in a small footprint. These systems use the XLM-62 module as a core building block with 10 units wired in series to increase distribution voltages and can be integrated with large UPS systems.

Can a supercapacitor module be configured in series?

Supercapacitor modules can be configured in series to increase the working voltage, which is referred to as a module string. Individual modules or strings of modules can be configured in parallel to meet application needs with respect to current or power required over a desired timeframe.

What are Eaton xtm-18 & xvm-16 supercapacitor modules?

Eaton's XTM-18 and XVM-16 supercapacitor modules provide energy storage for high power, high charge/discharge applications such as material handling systems, warehouse automation machines, small engine starting and wind turbines.

Are Eaton supercapacitors maintenance-free?

Eaton supercapacitors are maintenance-free with design lifetimes up to 20 years and operating temperatures down to  $-40^{\circ}\text{C}$  and up to  $+85^{\circ}\text{C}$ . They are constructed with eco-friendly materials for an environmentally conscious solution.

Does Eaton have a calculator containing all supercapacitors?

To assist in determining the number of modules in series and those subsequent strings in parallel, Eaton has developed a calculator tool containing all supercapacitors.

What is a LEID & how can it help a mobile energy storage system?

Besides, LEIDs can also serve as support structures and energy storage units for intermittent new energy sources, such as wind power and photovoltaics. Consequently, LEIDs significantly increase the energy density of mobile energy storage systems and simplify the system.
