

Where is fenecon battery Refactory located?

Fenecon has opened its CarBatteryReFactory. The factory in Iggenbach, Lower Bavaria (Germany), produces large-scale stationary storage systems from new, disused electric vehicle batteries. Production of management systems for home storage systems has also been relocated to the new plant.

Where are fenecon batteries made?

The company has been manufacturing storage systems from electric vehicle batteries since 2017 and small-series production is currently taking place at the Kuenzing plant in Bavaria but large-series production will be launched at the site in Iggenbach. Fenecon specialises in home, commercial and industrial energy storage solutions.

Where is fenecon based?

Image by Fenecon GmbH. German energy storage developer Fenecon GmbH has begun the construction of a factory in Bavaria for the production of energy storage solutions from used vehicle batteries. The groundbreaking ceremony took place on Friday, the company said.

How much does fenecon battery Refactory cost?

The newly named Carbattery Refactory will cost around 22 million euros in the first stage of expansion. Fenecon has already been producing large container storage units from electric vehicle batteries since 2017. Small series production is currently still taking place at the plant in K&#252;nzing.

What is fenecon energy storage?

The FENECON electricity storage systems use the OpenEMS-based smart energy management system FEMS to enable grid-serving charging and discharging up to intelligent sector coupling of electricity, mobility and heat. At FENECON, we pursue the clear vision of the 100% energy transition.

Will fenecon increase its capacity with the carbatteryrefactory?

Fenecon will significantly increase its capacities with the CarBatteryReFactory: The company has been manufacturing large containerised storage units from EV batteries since 2017, but only in small-batch production at its plant in K&#252;nzing, Germany.

Fenecon's new factory will produce industrial storage batteries from so-called zero and second-life vehicle batteries. Accordingly, Europe's largest production facility for storage units made from vehicle batteries will be ...

The building's energy management system utilises two large in-house storage units with 1,000 and 1,800 kWh. The energy management system coordinates and optimises all consumers, energy generators (PV system with 500 kWp on the roof and facade surfaces), and large heat pumps.
