

What is the energy demand supply situation in Myanmar?

The Myanmar energy demand supply situation indicates that power generation mix must shift to more coal and hydropower, continued use of biomass, natural gas consumption, and appropriate increase of renewable energy such as solar PV and wind power generation.

What is Myanmar's energy policy?

Myanmar's energy policy aims to increase the use of its abundant water resources for hydropower development to reduce the need for fossil fuel power generation. Energy efficiency management can reduce energy consumption to minimise harmful environmental impacts.

How can Myanmar improve its power system?

Rebuilding Myanmar's power system will require establishing trust to develop the power sector. Developing solar PV can add incremental generating capacity in a relatively fast manner.

Does Myanmar have a power supply gap?

Myanmar's power sector will likely continue to experience significant challenges. To sustain the current level of power supply would require adding 300-500 MW every year until 2030. Scenario analysis on the power supply-demand gap illustrates that available generating capacity is projected to not meet the growing demand.

Can power trade and imports help ease power shortages in Myanmar?

While power trade and imports could help ease the electricity supply shortages, it remains challenging under the current political circumstance in Myanmar. Myanmar's power sector continues to record losses due to a combination of several factors, including currency depreciation, increasing grid maintenance cost, and revenue decline.

How much will Myanmar's power system cost?

As per the REN scenario, the total cost of expanding Myanmar's power system is expected to be USD 27.5 billion. Thus, the LEAP-NEMO model for Myanmar predicts that transitioning from the current regime to a sustainable path will save USD 1 billion.

This work is the first known attempt in literature at modeling the Myanmar Power System on the transmission and sub-transmission levels and optimizing reactive power compensation with the...
