

What is a solid-state battery?

As the name suggests, solid-state batteries contain a solid electrolyte, made from materials such as ceramics. That makes them different from conventional lithium-ion batteries, which contain liquid electrolyte. This next-generation technology theoretically packs more energy into each unit of volume than lithium-ion batteries.

Are solid-state batteries the future?

Martin, whose research areas include glassy solid electrolytes for solid-state lithium batteries and high-capacity reversible anodes for lithium batteries, believes that solid-state batteries are the future and that hybrid semi-solid batteries will likely be a transition between liquid and solid-state batteries.

When will solid-state batteries be available in Japan?

A sign is displayed outside a Toyota Motor Corp. dealership on Jan. 30, 2024 in Tokyo, Japan. Japan's Toyota, for instance, has said it is aiming to bring solid-state batteries into mass production between 2027 and 2028.

Are semisolid-state batteries safer than lithium-ion batteries?

The power cells, called "semisolid-state batteries," are considered safer than the lithium-ion sort because they are less flammable than lithium-ion batteries.

Are solid-state batteries the 'Holy Grail' of sustainable driving?

Solid-state batteries have long been billed as the "holy grail" of sustainable driving. As the name suggests, solid-state batteries contain a solid electrolyte, made from materials such as ceramics. That makes them different from conventional lithium-ion batteries, which contain liquid electrolyte.

Who makes semi-solid-state batteries?

The development of semi-solid-state batteries is primarily being led by Chinese companies, including CATL, one of the world's biggest battery producers, and the likes of WeLion, Qingtao Energy and Ganfeng Lithium.

Die Semi-Solid-State-Zellen an sich verfügen über einen Festelektrolyten, ein Anodenmaterial aus einem Silizium-Grafit-Verbundwerkstoff und eine Kathode mit „ultrahohem“ Nickelgehalt. Außerdem zitiert das Portal Qin Lihong, Mitbegründer und Präsident von Nio, der bei einer Veranstaltung im Februar gesagt haben soll, dass „das 150-kWh ...

The company expects to supply semi-solid-state batteries to Weilai (NIO) in bulk in April next year. The specific scale will be determined based on Weilai's needs, and it should be a gradual climb. NIO will use the solid-state batteries in a cell-to-pack (CTP) design that removes the need for modules, thus further increasing energy density ...

24M, a startup battery company founded as a spin-off from MIT, claims it has made a breakthrough in creating semi-solid lithium-ion battery cells with an energy density exceeding 350Wh per kg. ... Solid state battery technology has been around for about 20 or so years. The concept is to use a solid electrolyte rather than liquid electrolyte.
