

What is a landscape photovoltaic pattern?

The landscape photovoltaic pattern. This scheme proposes a suggestion for different patterns of photovoltaics, based on parallel stripes, traditionally arranged, or arranged according to island patches. A "natural" stripes pattern is proposed, too. Porosity, or density, is a relevant attribute of a photovoltaic pattern.

Can new PV patterns improve ecological performance?

The study argues that new patterns would help in allowing a better ecological performance of the PV landscape, and opens many research questions, such as the quantitative assessment of the ecological beneficial impacts generated by new PV patterns.

What are the design parameters of a photovoltaic array pattern?

Main design parameters of a photovoltaic array pattern in which modules are arranged in regular, parallel stripes. Different design possibilities based on tilt and azimuth angles, and on land area occupation ratio have been analyzed, with reference to the main energy-spatial related implications, and to land use and visual impacts.

How to improve the ecological performance of photovoltaics?

Criteria for improving the ecological performances of photovoltaics have been identified in relation to the siting, the planning and the design (landscape and architecture) processes. PV landscapes can be mixed with agriculture. PV landscapes can be mixed with recreational functions.

What is a photovoltaic landscape mosaic pattern?

The photovoltaic landscape mosaic pattern. This scheme proposes an understanding of a photovoltaic landscape in terms of mosaic pattern (patch, corridor, matrix model) based on landscape ecology approach and methods (Forman).

What is a photovoltaic landscape?

An original energy-design vision for on-ground PV is advanced, rooted in an original concept of "photovoltaic landscape". An understanding of PV landscapes in terms of patterns is given, and new patterns for PV are investigated.

The efficiency ( $\eta$  PV) of a solar PV system, indicating the ratio of converted solar energy into electrical energy, can be calculated using equation [10]:  $\eta = P_{out} / P_{in}$  ...
