As of 2020, renewables - including wind, solar, biofuels, geothermal, and hydro power - comprise roughly 77% of Nicaragua's total energy supply, with oil providing the remaining 23%. [1] Fossil fuels play a slightly larger role in electricity generation, accounting for 30.2% of the national total in 2020, followed by geothermal (20.21% ...

Through its subsidiary, Polaris Energy Nicaragua S.A., the Company owns and operates an 82 MW capacity geothermal facility, the San Jacinto-Tizate Geothermal Plant ("San Jacinto"), including the recently completed Binary Unit (defined below).

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.
