

Does North Korea have a ramshackle electricity grid?

"We would turn the light on when we ate and then we turned it off right away." North Korea's ramshackle electricity grid draws on ageing hydro and coal-fired thermal power stations, many of them built during the cold war with Chinese and Soviet assistance. UN sanctions restrict the regime's imports of refined oil and petroleum products.

Can solar power solve North Korea's energy problems?

Jeong-hyeon, a North Korean escapee, told the Financial Times that many residents in Hamhung, the second-most populous city, "relied on a solar panel, a battery and a power generator to light their houses and power their television". But solar power is still only a partial solution to the country's energy woes.

Does North Korea have a two-tier energy system?

Under North Korea's two-tier energy system, which prioritises industrial facilities, the only way for many citizens to access electricity is to pay state functionaries to allow them to install cables to siphon off power from local factories.

ESC Energy Systems Company GmbH has its registered office in Poggersdorf, Austria. Its current status is listed as active. The company is registered at the Commercial register at the local court of Klagenfurt with the legal form of
