

Does North Korea have energy security challenges?

Access to solar panels has created capacity where the state falls short, but the overall energy security challenges facing the nation are daunting. This report, "North Korea's Energy Sector," is a compilation of articles published on 38 North in 2023 that surveyed North Korea's energy production facilities and infrastructure.

When did North Korea start implementing small- and medium-sized power plants?

In the meantime, North Korea began instituting a new system of small- and medium-sized power plants in 2000. The scheme was intended to meet electricity demands in small factories and homes.

Why is North Korea reliant on hydro power?

North Korea is reliant on hydro power, which leads to shortages in winter, when there is little rainfall and ice blocks the flow of rivers. Power plants that were never completed/started up are shown in Salmon. Allegedly, it fails to generate power at full capacity due to harsh weather.

Does North Korea have an oil refinery?

North Korea has a smaller oil refinery, the Sungri Refinery, on its Russian border. The country had been able to import oil from China and the Soviet Union for below market prices, but with the end of the Cold War, these deals were not renewed, leading to an explosive rise in oil prices for Pyongyang and a drop in imports.

evaluates various initiatives and proposals regarding international energy cooperation with North Korea. It is followed by a section analyzing the energy developments in North Korea under the Kim Jong-un administration, focusing on the renewable energy sector. The conclusion highlights the key arguments
