

What type of energy does Norway produce?

Norway is a large energy producer, and one of the world's largest exporters of oil. Most of the electricity in the country is produced by hydroelectricity.

Why is Norway a major energy producer and exporter?

At the same time, as a major oil and gas producer and exporter, Norway will need to support an evolution of its energy sector amid a global energy transition. Thanks to its ample reserves of oil and natural gas, Norway is a net energy exporter: in 2020, 87% of its energy production was exported.

Why is energy in Norway so important?

With North Sea oil production having peaked, disagreements over exploration for oil in the Barents Sea, the prospect of exploration in the Arctic, as well as growing international concern over global warming, energy in Norway is currently receiving close attention.

Is Norway a good exporter of electricity?

Norway is also historically a net exporter of electricity to neighbouring countries, reaching a record 20.5 TWh of net exports in 2020, making it one of the largest exporters in Europe. Norway is therefore well-integrated in the Nordic and European electricity markets.

What role will energy technology play in Norway's energy transition?

Energy technology and innovation will play an important role in Norway's energy transition, in particular to leverage the existing strengths of its energy sector in new areas, such as CCS and hydrogen.

How important is the petroleum industry in Norway?

As such, the sector plays a critical role in the Norwegian economy and in financing the Norwegian welfare state. The country's export revenues from the petroleum industry are estimated to be over NOK 800 billion (EUR 80 billion) in 2021 and expected to double in 2022.
