

Switching to renewable energy could reduce the current economic, social and environmental cost of electricity supply in Russia's remote areas. The objective of this paper is ...

The Rural Electrification Master Plan (REMP) envisages the use of decentralized off-grid renewable energy systems through the mini/micro hydropower and SHS (3.8%) and wind projects by...

Switching to renewable energy could reduce the current economic, social and environmental cost of electricity supply in Russia's remote areas. The objective of this paper is to review Russia's off-grid renewable energy policy by focusing on the promotion of wind- and solar-diesel hybrid energy in the Russian Arctic.

This paper presents the solution to utilizing a hybrid of photovoltaic (PV) solar and wind power system with a backup battery bank to provide feasibility and reliable electric power for a...

The 600MW Monsoon Wind Power Project is a landmark initiative under construction, featuring a 500KV transmission line linking Laos to Vietnam, and is planned to be completed by 2025. As the first wind farm in Laos and the ...

The first turbine has been installed at the 600-MW Monsoon cross-border wind project in Laos that will transmit power to Vietnam, engineering, procurement and construction (EPC) contractor Power Construction Corporation of China (PowerChina) announced.

The 600MW Monsoon Wind Power Project is a landmark initiative under construction, featuring a 500KV transmission line linking Laos to Vietnam, and is planned to be completed by 2025. As the first wind farm in Laos and the largest in Southeast Asia, Monsoon set a new benchmark by establishing a bankable cross-border Power Purchase Agreement.

This is done by making projections based on surveys and interviews, including a time-use survey, in three off-grid villages located in Myanmar, Indonesia, and Laos. Our analysis presented the living condition, highlight the types of energy sources, how, and in what rhythms people use energy on a daily basis in those villages.

The main off-grid delivery model in the Lao PDR, in terms of scale, is the off-grid component of the Rural Electrification Programme of the World Bank. So far, this programme has mainly promoted standard size solar home systems (SHS) under a rent-to-buy model, whereby end-users pay a small fee upfront and then an ongoing monthly fee over 5 to ...
