

Why is oil a problem in Iran?

Oil in Iran is a major cause of air pollution and greenhouse gas emissions. Iran is in a constant battle to use its energy resources more effectively in the face of subsidization and the need for technological advances in energy exploration and production. In 2008, energy wastage in Iran amounted to six or seven billion dollars.

What is Iran's energy supply?

In 2020, the Total Energy Supply (TES) in Iran was primarily sourced from oil and gas, with gas being the predominant contributor at 69% and oil at 29%. Nuclear power and renewable sources each accounted for 1% of the nation's TES.

What role does energy play in Iranian politics?

Energy plays an important role in Iranian politics. Robert Baer in his 2008 book *The Devil We Know: Dealing with the New Iranian Superpower* argued that Iran had attained the status of an energy superpower and was on its way to become a military-political superpower.

Does Iran use natural gas & oil?

Natural gas and oil consumption both account for about half of Iran's domestic energy consumption. With its heavy dependence on oil and gas revenues Iran continues to explore for new sources of natural gas and oil. Since 2009, Iran has focused its energy sector on the exploration of the South Pars offshore natural gas fields in the Persian Gulf.

How much energy did Iran spend in 2022?

According to the IMF, Iran spent \$163bn in explicit and implicit energy subsidies in 2022, which amounted to more than 27 per cent of GDP -- the highest share of the economy of any country in the listing.

How much oil does Iran have?

In 2010, Iran held 10% of the world's proven oil reserves and 15% of its gas. It is OPEC's second largest exporter and the world's fourth largest oil producer. Iran possesses significant energy reserves, holding the position of the world's third-largest in proved oil reserves and the second-largest in natural gas reserves as of 2021.

How It Works.
