## Photovoltaic aluminum alloy middle plate is also useful

Is aluminum a good material for solar panels?

With its advantages of light weight, high strength, corrosion resistance and durability, aluminum is widely used in building solar panel frames and photovoltaic supports. Research shows that aluminum is the most widely used material in solar photovoltaic (PV) applications, accounting for more than 85% of most solar PV modules.

How much aluminium will be used in photovoltaic solar systems?

Consequently,0.64% of total annual aluminium production will be used in PV systems in decade 2010-2020, which will reach to 1.21% in decade 2020-2030 and 1.63% in period of 2030-2050. Temperature is another important factor in efficiency of the photovoltaic solar systems.

What materials can be used to build a photovoltaic solar system?

Construction and structure of photovoltaic solar systems are the main part of this system that can be made of aluminium. Steel and aluminium are the most common materials that are used in construction of solar power systems.

Which eutectic binary aluminium alloys are used in solar power system?

Eutectic binary aluminiumm alloys such as Al-0 wt% Ni,Al-33 wt% Cu and Al-7.5wt% Cahave been successfully used as absorber (low reflection and high absorption). The mechanical and thermal ability of aluminium alloys and regeneration of surface is etching enhances their properties in solar power system.

Why is aluminium a good choice for solar power systems?

Light weight, high strength, proper corrosion properties, high surface reflectivity, excellent electrical and thermal conductivities, as well as special optic properties of its anodic coating are such as interesting properties of aluminium that make it inseparable part of solar power systems.

Can aluminum be used for photovoltaics?

In all these applications, however, the success of photovoltaics relies on using aluminum architectural components for both fixed and moving structures. Here, we discuss the benefits and drawbacks of aluminum for applications in the solar power industry as well as some design considerations for framing systems. What Are The Drawbacks?

(PV). Aluminium alloys have became a significant and inseparable part of each of the men- tioned group of solar power systems, mainly due to special properties of aluminium and its alloys. ...

Rolled aluminium also can be suitable for certain solar energy applications since it is cheaper than other reflector materials and can be cost-effective material in this application [45]. ... 6061 aluminium alloy that
