

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

Can a manufacturer become a re-processor of PV modules?

Today's manufacturer may in 25 years become a recycler, or rather, a re-processor of PV modules and other components. Components should be designed for recyclability and to control toxic materials. Current best practices are to minimize hazardous materials and/or design for recyclability and control of such materials (IRENA 2016).
