

What is PV\*SOL online?

Do you want more? PV\*SOL online is a free tool for the calculation of PV systems. Made by Valentin Software, the developers of the full featured market leading PV simulation software PV\*SOL, this online tool lets you input basic data like location, load profiles, solar power (photovoltaic, PV) module data, Inverter manufacturer.

Where can I find help with PV\*SOL?

Visit our Forum and our PV\*SOL help pages At Valentin Software we develop products for the simulation, design and forecasting of photovoltaic, solar thermal and heat pump systems.

How do I design a PV system?

Sunny Design makes designing PV systems very convenient. Simply open Sunny Design in your web browser or on your iPad or Android tablet and enter all the required information. The ideal system configuration will be available within just a few minutes.

How does PV\*SOL work?

By entering the daily mileage and the downtimes, PV\*SOL calculates how much PV energy can be used to charge the electric vehicles. The detailed results overview contains representations of the simulation results, the results of cost-effectiveness and a detailed tabular energy balance with all the gains and losses that occur.

What is PV\*SOL premium?

The unique 3D visualization is the highlight of PV\*SOL premium. You can visualize all common types of systems in 3D, whether roof-integrated or roof-mounted, whether on small angled roofs, large industrial halls or open spaces - with up to 7,500 mounted modules or up to 10,000 roof-parallel modules, and calculate the shading based on 3D objects.

Who uses our software?

Small and large companies from the fields of heating, electrical and building technology use our software for design and simulation worldwide. Educational institutions use our software for the practical part of teaching and students use our programs for their projects and final theses.
