

What is IronRidge Contour ® trim?

IronRidge Contour ® Trim elevates the look of any solar array by providing a sleek trim (or skirt) across the south edge or around the perimeter to hide components that are visible beneath the solar panels. Homeowners want the solar on their home to meet their energy needs, while not detracting from their home's aesthetics.

Why do you need solar panel edge trim?

Animals, such as rodents, pigeons, other birds, and environmental issues can somehow destroy or damage our solar panels. For this reason, solar panel edge trim makes it possible to avoid such damages and other external issues by simply trimming the edges.

What is Contour ® solar panel trim?

Homeowners want the solar on their home to meet their energy needs, while not detracting from their home's aesthetics. Contour ® will make any array look great, and have your crew on and off the roof in a snap. Trim comes in 84" lengths of black powder-coated aluminum. Pieces can be cut to length to fit the array edge.

Why should I trim my solar panels?

Here are the benefits of having our solar panels edge trimmed: As mentioned above, trim edges allow a gap between the roof and the panels. This gap allows the air to circulate which is also helpful in the ventilation of the solar panel system. It maintains airflow and is very durable to various weather changes.

How does a trim clamp work?

The Clamp secures to bottom flange of most modules. T30 Torx bolts used to reduce visible gaps (bit included). The Outer Corner Cap easily slides onto Trim, without any tools, to wrap Trim around outside array corners. The Inner Corner Cap easily slides onto Trim, without any tools, to wrap Trim around inside array corners.

What is a SolaTrim pest barrier?

The SolaTrim Pest Barrier is an all-weather, long lasting Pest and Debris abatement system designed to prevent Pigeons and Rodents from nesting under or damaging residential solar system arrays. The system allows air to circulate underneath the solar panels, maintaining a protected area between the roof surface and the bottom of the solar panels.
