How do I install gates on solar-powered electric fencing?

There are many ways of installing gates on solar-powered electric fencing. We are going to use an example of tying an existing traditional tube frame gate into our electric fence. This essentially requires stringing one or more conductors across the gate frame and connecting them to the powered fence.

How do I install a solar charging unit on an electric fence?

Make sure the T-post is close to the electric fence. Next,mount the solar charging unit on top of the T-post,and swivel it to face south(provided you're in the northern hemisphere,thus maximising its potential for sunlight exposure).

What are the different types of solar electric fences?

The various types of solar electric fences are: Permanent solar electric fences are powered by solar energy and require no batteries. These fences rely on solar power to operate and are vulnerable to lightning strikes, so it is necessary to protect them with a lightning diverter or arrestor.

How do you test a solar electric fence?

To do so,use an electric fence tester/voltage tester on the electric fence. It's worth testing the voltage of your solar electric fence at regular intervals,and adjusting it accordingly (note that disruption along the fence from weeds and debris may cause fluctuations in voltage).
