How many solar PV installations are there in the UK?

We present the results of a major crowd-sourcing campaign to create open geographic data for over 260,000solar PV installations across the UK,covering an estimated 86% of the capacity in the country.

What percentage of PV installations are small-scale?

In the UK,around 99% of PV installations are small-scale (<50 kW),and they account for around 30% of the nation's installed capacity 16. Our methodology is applicable across many countries.

What is the UK ground-mounted solar completed assets report?

Solar Media Ltd publish a "UK Ground-Mount Solar Completed Assets Report" 17 which includes detailed information for all ground-mounted solar PV systems in the UK with nominal capacity over 250 kWp.

How many annotated solar panels are there?

The dataset of 2,542annotated solar panels may be used independently to develop detection models uniquely applicable to satellite imagery or in conjunction with existing solar panel aerial imagery datasets to support generalized detection models.

Why do solar PV installations clump?

A subtle but important effect is 'contagion' of influence, in which an individual solar PV site can influence local neighbours to adopt the technology as well 29. This is an additional source of the clumping of solar installations, not directly predictable from geographic features.

Do solar panels have object detection models?

Reports of solar panel installations have been supplemented with object detection models developed and used on openly available aerial imagery, a type of imagery collected by aircraft or drones and limited by cost, extent, and geographic location.

A 1 m2 solar panel with an efficiency of 18% produces 180 Watts. 190 m2 of solar panels would ideally produce 190 x 180 = 34,200 Watts = 34.2 KW. But inclined solar panels also need some spacing between them so ...
