Can solar panels be installed in the winter?

Yes- solar panels can be installed in the winter! However, some installers may want to wait to begin an installation until the warmer weather starts. Cold and icy conditions can be hazardous for installation work, and it might not be a risk an installer is willing to take.

Are solar panels effective during the winter season?

While a hot, sunny day in the middle of summer will yield an adequate level of solar energy production, these are not the only days of the year where solar panels are working in favor of the home or business owner. A widespread misconception is that solar panels are hardly effective during the winter season.

Can solar panels generate electricity in winter?

Yes, solar panels can generate electricity in winter. While their efficiency may decrease due to shorter daylight hours and potential snow coverage, they can still produce significant energy, especially on clear, sunny days. Solar panels generate electricity from sunlight, not heat, so cold temperatures can actually improve their efficiency.

Do solar panels need winter maintenance?

Periodic winter maintenance is often included in maintenance packages offered by solar companies. Snow-shedding coatings can be applied to the surface of solar panels to prevent snow and ice from sticking, according to a study conducted by The University of Michigan.

How do I protect my solar panels during winter?

Similarly, watch for any tree branches or other foliage that could block light from reaching your solar panels. Keeping your trees and bushes in check will allow your solar panels to absorb as much sunlight as possible, even as the days get shorter. Winter is coming, but that doesn't mean your solar power generation needs to suffer.

Can solar panels change the weather?

By pairing your panels with a solar battery, you can store up your sunny days for a stormy one. While solar panels and battery storage can be a significant investment, solar companies like Sunrun offer flexible financing options and solar plans for as little as \$0 down. While solar panels can't change the weather, they can help you ride it out.
