

Does full-end-capping engineering improve photovoltaic performance and stability?

Therefore, it is believed that full-end-capping engineering provides a very simple, versatile and general approach to improve photovoltaic performance and stability of the OSCs. The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

Can end-capped polymer donors improve photovoltaic performance and stability?

Besides, the devices with end-capped polymer donors also possess better stability than that with PM6 by removing unreacted bromine and trimethylstannyl end groups. Therefore, it is believed that full-end-capping engineering provides a very simple, versatile and general approach to improve photovoltaic performance and stability of the OSCs.

What is the experimental method for investigating capping layer design guidelines?

The experimental method for investigating capping layer design guidelines. A. Machine Learning and Feature Importance Rank The 21 capping layer materials, including tetrapropyl-ammonium iodide (TPAI) and phenyltriethylammonium iodide (PTEAI), with various concentrations (5-15 mM) are deposited and annealed at temperatures between 50°C-125°C.

Does end-capping affect device stability?

To study the effect of end-capping on the device stability, all unencapsulated devices were tested for storage stability, thermal stability and light stability in a N<sub>2</sub> glove box ( Fig. 6 a-d and Fig. S20 ). After storage for 1200 h, the stability of the end-capped devices is better than the PM6:Y6 device.

Is pteai a stable capping-layer material?

The statistical analysis (ANCOVA) of the films shows that the red degradation onset of the most stable capping-layer material in this study, PTEAI, is statistically significantly different, with 95% confidence level, in comparison to other materials and bare MAPbI<sub>3</sub> film (Supplementary Fig. 8).

How do you make a capping layer solution?

Capping-layer solutions were made in three different concentrations, 5, 10, and 15 mM, by mixing ammonium iodide/ammonium bromide powder with isopropyl alcohol, pure, ACS reagent, ≥99.5% (Sigma-Aldrich). A list of ammonium iodide/ammonium bromide powder manufacturers is listed in Supplementary Table 5.

The forum conducted in-depth discussions on the latest support policies of the state for desert photovoltaic power stations, as well as how to solve and cope with the difficult problems in the design, equipment selection, economic calculation, ...

Organic solar cells that are semitransparent in the visible and strongly absorbing in the near-infrared spectral

regions present unique opportunities for applications in buildings ...

photovoltaic grew from a 0.05% contribution to 1.19% [10], [11]. This positive evolution in the Portuguese photovoltaic market is related to its potential for solar electricity generation, among ...

The migration of charged perovskite defects or ions, which combines both fast (e.g., iodine vacancy and interstitial) and slow components (e.g., methylammonium vacancy) at different timescales, has been unveiled to ...

An effective approach is reported to enhance the stability of inverted organo-tin halide perovskite photovoltaics based on capping the cathode with a thin layer of bismuth. Using this simple ...

solar photovoltaics (PV) facilities on potentially contaminated lands and municipal solid waste (MSW) landfills, noting that these sites: May provide an economically viable reuse for sites that ...

Interfacial passivation plays a pivotal role in achieving efficient and stable perovskite solar cells. Meanwhile, the introduction of 2D perovskites has also been widely reported to be beneficial for enhancing the performance ...

Targeting interfaces is important because long-term degradation of a solar cell often starts where different materials contact each other. The SAM (self-assembled monolayer), two-dimensional (2D) capping layer, and ...

A series of experimental studies on various PV support structures was conducted. Zhu et al. [1], [2] used two-way FSI computational fluid dynamics (CFD) simulation to test the influence of ...

offshore (or water surface) photovoltaic, combined with the current mainstream structural forms of photovoltaic support, and comprehensively analyzes their advantages and disadvantages, so ...

20 August 2020 Split-ligand re-precipitation via selective ligand capping for stable perovskite quantum dots in efficient photovoltaic application. Dong Hwan Wang, Jin Young Kim, ...

1 ??????????????,?? ?? 2 ??????????????,?? ?? ?????:2023?2?27?;????:2023?3?19?;????:2023?3?29?. ?? ??? ...

Photovoltaic performance and surface state of the 1D/3D structure. PL mapping of the 1D/3D film a) compared with 3D film b) in a large area. c) Cross-sectional SEM image shows the device ...
