

Answers you will find enclosed in the report detailed Financial Model and Analysis of 5 MW Photovoltaic (Solar PV) Power Plant investment in Poland (IRR, WACC, Payback, NPV, Cash Flow, etc.) The report provides a complete picture of the market situation, dynamics, current issues and future prospects.

EU countries achieved a 22% increase in PV installed power in comparison to 2021 - almost three times lower than in Poland. In 2022, Poland was ranked again on the second place, after Germany, in terms of increase in the PV installed power in the European Union.

Solar PV will cover around 10% of the country's electricity in 2022, while it covered just about 1% three years ago. This rapid increase is primarily due to the popularity of home solar installations in the country and highly favorable financial conditions for their owners.

Out of 41.4 GW of total photovoltaic capacity installed in 2022 almost 5 GW was installed in Poland. This demonstrates the unwavering growth of investment in solar energy in Poland. Only Germany and Spain report a faster photovoltaic industry growth rate.

The sudden increase in solar installations in recent years was mainly due to Poland's rooftop PV incentive program and its net metering schemes, which ended by 1 April 2022, but also due to a "contract for difference" (CfD) tender scheme for 1 MWp solar farms implemented at the end of 2016.

Answers you will find enclosed in the report detailed Financial Model and Analysis of 50 MW Photovoltaic (Solar PV) Power Plant investment in Poland (IRR, WACC, Payback, NPV, Cash Flow, etc.) The report provides a complete picture of the market situation, dynamics, current issues and future prospects.

According to Agencja Rynku Energii S.A., the total capacity of solar PV plants in Poland reached almost 4 GW at the end of December 2020. Once a black spot on the PV map of Europe, Poland ranked fourth in 2020 among EU countries for PV growth, after Germany, the Netherlands, and Spain. In 2020 alone, the country installed almost 2.7 GW of new PV.
