

Who makes EV chargers for the postal service?

These stations will be able to efficiently charge Postal Service EVs overnight prior to the next day's deliveries. The Postal Service's first 14,000 EV chargers will be manufactured by three suppliers: Siemens, Rexel/ChargePoint and Blink. The event featured battery electric COTS vehicles manufactured by the Ford Motor Company.

Are EV charging stations coming to the US Postal Service?

The US Postal Service showed off its first EV charging stations, and some spiffy new Ford E-Transit BEVs, at an event in Atlanta yesterday, with hundreds of new sorting and delivery centers set to open around the country this year.

How many postal service EV charging stations are there in 2024?

As of January 2024, the Postal Service has opened 29 S&DCs nationwide. The charging stations displayed at the Atlanta S&DC were manufactured by Siemens. These stations will be able to efficiently charge Postal Service EVs overnight prior to the next day's deliveries.

How much does USPS spend on new charging stations?

USPS is spending about \$10 billion on its new fleet, but Congress gave the agency \$3 billion in the Inflation Reduction Act to buy more electric vehicles and charging stations than it could otherwise afford. USPS says the charging stations are the first of hundreds it will install at new S&DCs across the country throughout this year.

Does USPS have electric vehicle charging stations?

Sign up for breaking news. The Postal Service is rolling out the first of its new electric vehicle charging stations, and laying the foundation for a majority-electric fleet. USPS on Monday unveiled its first set of electric vehicle charging stations at the South Atlanta Sorting and Delivering Center (S&DC).

Should USPS invest in electric vehicles?

White House Council on Environmental Quality Chairwoman Brenda Mallory said USPS investments in electric vehicles are a "victory for the U.S. Postal Service, America's electric vehicle industry, workers, and the environment."
