

Is the Turkmenistan-China Gas Pipeline a contribution to International Energy Cooperation?

Such a large-scale project as the Turkmenistan-China gas pipeline, through which Turkmen gas is supplied to the friendly country, can be viewed as a contribution of our state to the development of international energy cooperation.

What is Turkmenistan's energy policy?

The energy policy being consistently implemented under the leadership of President of Turkmenistan Serdar Berdimuhamedov is aimed at the comprehensive development of the fuel and energy complex and its dynamic integration into the international energy system.

What is Turkmenistan focusing on?

Turkmenistan is focused on the accelerated modernization of the fuel and energy complex and the expansion of its infrastructure through the creation of modern production facilities. Regarded in this light, our state's priority is the processing of natural gas and the production of new types of commodities.

When was the Turkmenistan-China gas pipeline opened?

The Turkmenistan-China gas pipeline, the source of which is the "Galkynys" gas field, was opened on December 14, 2009 with the participation of National Leader of the Turkmen people Gurbanguly Berdimuhamedov. This date became an unforgettable event for workers in the oil and gas complex of our country.

Is biomass a source of electricity in Turkmenistan?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Turkmenistan: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Where does oil come from in Turkmenistan?

Oil, which is our national wealth, is extracted from carefully developed deposits such as "Uzynada", "Barsagelmez", "Goturdepe", "Northern Goturdepe", "Gamyshlyja", "Keymir", "Altyguyi". Along with the land part of Turkmenistan, marine complexes located in the Turkmen sector of the Caspian Sea are also developing.

Turkmenistan: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Turkmenistan had a total primary energy supply (TPES) of 26.75 Mtoe in 2014. Electricity consumption was 14.64 TWh. Most of this primary energy came from fossil fuels. All of the electricity is generated with natural

gas.

Turkmenistan had a total primary energy supply of 26.75 Mtoe in 2014. [1] Electricity consumption was 14.64 TWh. Most of this primary energy came from fossil fuels. [1] All of the electricity is generated with natural gas.
