

What are the energy planning strategies for Burundi?

Energy Planning Strategies for Burundi The Burundian energy supply highly depends on traditional use of biomass. The literature shows that the power supply of this country mainly relies on hydropower generation. Many hydropower projects are under development to increase the electricity access of this country .

What will become the Burundian power sector in long-run?

Although the country is endowed with a huge potential for various energy resources , there is higher uncertainty about what will become the Burundian power sector in long-run. This uncertainty is higher as the target of reaching 30% of electrification rate in 2030 is still far from the current situation (Fig. 2).

Why is energy demand increasing in Burundi?

Limited capability and resources to improve energy efficiency are also the main factors contributing to the increase of Burundian energy demand. Incorporating these factors into energy demand forecasts is crucial for a capital constrained developing country, like Burundi, where reliable energy supply capability is limited. 4.2.

Does Burundian power supply match domestic energy demand?

As the Burundian power supply not matching the domestic energy demand ,the energy needs is mostly represented by traditional biomass at about 96% of total energy consumption, mostly used for cooking in rural areas (in traditional way) and urban areas as charcoal .

Why is Burundi lagging in energy supply?

Despite some efforts in the region to increase energy supply at national and regional levels , Burundi is lagging from meeting its total power demand: 10% of its population had access to electricity in 2012 , this access rate has only turned to 11% in 2019 according to World Bank data.

How much energy does Burundi use?

A great portion of energy consumption in EAC is traditional biomass. Burundi accounts 96.6% of total consumption in form of wood and charcoal whereas electricity, petroleum products and other are respectively represented by 0.6%, 2.7% and 0.1% . The reliance on traditional use of biomass in Kenya is 68% of its total energy consumption .

The report on Burundi poverty reduction highlighted that access to adequate supply of energy will play a fundamental role to develop the country in different areas: agricultural sector (mechanization and agricultural products preservation; mining sector (minerals extraction and processing); improve and expand economic activity; improve the climate for business for ...

Robin Bedilion is a Principal Team Lead in the Energy Systems and Climate Analysis group at EPRI. Ms. Bedilion conducts technoeconomic analyses and cost and performance research evaluating current and

emerging power sector ...

So, reducing energy consumption can inevitably help to reduce emissions. However, some energy consumption is essential to human wellbeing and rising living standards. Energy intensity can therefore be a useful metric to monitor. ...
