

Does Romania need a high-voltage direct current cable?

Separately, Romania has a project for an undersea cable that would deliver the electricity from the country's future offshore wind power plants. A high-voltage direct current cable across Romania to Hungary is "the number one priority," Minister of Energy Sebastian Burduja said.

Why is Romania's energy project so important?

Romania's Energy Minister Sebastian Burduja said the project was of strategic importance for his country and the EU. "If you look at the energy map of Europe over the past few months ...you see that on the eastern flank essentially we are paying a very high price recently -- and that's because there is not enough diversification," Burduja said.
