

Does Saint Lucia need a power supply?

For decades, Saint Lucians have benefitted from a reliable power supply, but at a cost. Our reliance on imported fossil fuels for the generation of electricity has left our small island nation vulnerable to external shocks, due to fluctuations in global oil prices over which we have no control.

How can energy efficiency programs be implemented in Saint Lucia?

Energy efficiency program implementation-- Deploying a program to encourage cost-effective energy efficiency across different customer groups in Saint Lucia requires funding, staff, and appropriate regulations. If energy efficiency measures are not adopted, electricity loads will remain higher than projected.

How can wind turbines improve the energy system in Saint Lucia?

In addition to energy storage systems, demand response and frequency support from wind turbines can also be used to maintain system stability in the presence of high renewable generation. The two studies completed on the Saint Lucia electricity system are described in more detail below.

How much does wind energy cost in Saint Lucia?

LUCELEC-owned wind becomes cost competitive at or above EC\$124 (US\$46) per barrel of oil. Energy efficiency is the cheapest resource available, costing approximately EC\$0.14 to \$0.19 per kWh (including program operation costs), and is largely untapped in Saint Lucia.

How should the government of Saint Lucia deal with developers?

The Government of Saint Lucia must also maintain open discourse with the public and encourage participation. However, in the context of negotiations with developers, special care must be taken to ensure Saint Lucia/LUCELEC get the best possible result (often requiring careful negotiation and the use of leverage).

Is LUCELEC's metering infrastructure reducing Saint Lucia's electrical losses?

Advanced metering infrastructure installed across 20% of LUCELEC's customer base in 2010 reduced technical and nontechnical electrical losses. Despite these efforts, Saint Lucia's transmission losses remain moderately high at more than 9%.

The development of power system control centers has always been linked to the evolving of new technologies and innovative concepts. Switching to IP/TCP-based communication was one major evolutionary step in the past. Now, new precise time-synchronized phasor measurement units (PMU) based monitoring tools are on the rise and enable dynamic system observation. Future ...
