

What is French Polynesia's energy transition plan?

French Polynesia's energy transition plan has three main objectives: Change the energy model, by gradually replacing the use of fossil fuels with renewable energies in all activities

Does French Polynesia rely on hydrocarbons?

French Polynesia, like most island territories, is highly dependent on hydrocarbon imports. In 2019, 93.8% of energy consumed in the archipelagos came from imports of various petroleum-based fuels. The renewable energy penetration rate in power generation stood at 28.78% in 2019. This figure has remained stable over the last five years.

Is biomass a source of electricity in French Polynesia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. French Polynesia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

AFD and the Polynesian authorities have jointly defined a support program to assist French Polynesia with its energy transition. By 2030, the renewable energy penetration rate in power generation will reach about 75%.

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

GSL ENERGY announced that the company has supplied home solar energy storage system for a Polynesia's solar off grid project, which is installed with a capacity of 20kwh Lifepo4 Lithium ...

La Polynésie française est encore largement en retard sur la production d'énergie photovoltaïque et cela alors que l'ensoleillement et les barrières géographiques pour l'acheminement de l'électricité, en font un réel atout pour ce genre d'installation.

Perfect conditions for a large-scale stand-alone grid: the Reao atoll in French Polynesia is located in the middle of the South Pacific, 1 350 kilometers away from Tahiti. Each day the 324 inhabitants need around 250 liters of diesel to produce electricity.

SMA Solar Technology AG and its subsidiary SMA Sunbelt Energy GmbH have installed French Polynesia's first integrated PV-plus-storage project. The project features an output of more than 1MW on the ...

La Polynésie française est encore largement en retard sur la production

d'énergie photovoltaïque et cela alors que l'ensoleillement et les barrières géographiques pour ...

Approximately 6% of primary energy in French Polynesia is generated from renewable energy sources. [1]
Approximately 30% of electricity is generated renewably, primarily Hydroelectricity and solar power. [1]
Renewable generation is concentrated on Tahiti, with other parts of French Polynesia almost entirely reliant on fossil fuels. [2]

La Polynésie française est encore légèrement en retard sur la production d'énergie photovoltaïque et cela alors que l'ensoleillement et les barrières géographiques pour l'acheminement de l'électricité, en font un région très ...

French Polynesia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

GSL ENERGY announced that the company has supplied home solar energy storage system for a Polynesia's solar off grid project, which is installed with a capacity of 20kwh Lifepo4 Lithium battery and 5kva smart inverter. This is a residential rooftop solar energy storage system for home energy storage system. And here are the details of the system:

GSL ENERGY announced that the company has supplied home solar energy storage system for a Polynesia's solar off grid project, which is installed with a capacity of 20kwh Lifepo4 Lithium battery and 5kva smart inverter. This is a ...

SMA Solar Technology AG and its subsidiary SMA Sunbelt Energy GmbH have installed French Polynesia's s first integrated PV-plus-storage project. The project features an output of more than 1MW on the island of Tetiaroa, with 60% of the island's electricity demand covered following the completion of the installation.
