

So I have used rePackr to build my first 14s80p packs and ea. worked out to 180ah per cell pack, I am now wanting build my next 14s80p and I have more than enough cells, when I use rePacker there is no option to specify both cells in parallel and pack capacity, the idea is to have rePackr build the next 14 packs @r 180ahea. using 80 cells per pack out of all the ...

Bonjour à tous, cela fait un moment que j'ai pu me connecter faute de temps mais aujourd'hui je me reviens avec un projet de batterie. Etant toujours novice sur la conception d'une batterie, j'aimerais savoir si l'un ou l'une d'entre vous prendra le temps de m'aider pour réaliser mon projet.

That's is a good way to do it. What do u end up paying for a complete battery that way? I read some where Big Battery purchased 2000 of these batteries from Japan from Nissan and this is what made for the great prices. If they were purchased from a vehicle breakers or scrap yard there'sa chance they'llcome from vehicles that have been written off.

Warning: The information in this thread was obtained from various sources on the Internet, including any datasheets linked below, and is provided for reference only is not guaranteed to be accurate. To prevent fire or personal injury, never charge or discharge a cell before verifying the information yourself using the original specifications sheet provided by the ...

Hi everyone, I m new here and I recently found this forum and it's been very helpful to identify my batteries that I removed from laptops packs. Today I came across this one, it's from an old Toshiba laptop, they are marked Sanyo Japan EKH, HR-4/3FAU, does anyone know any specs for this model. I can't find it. Thank you.

Odd thing is that sometimes I can switch from USA to Amsterdam or Japan and it'll start to work for awhile. Then, it'll bomb out and I can sometimes change to another server and reconnects; other times nothing. Sometimes it'll be connected, run fine, then start getting connection issues, then have a few good hashes, then connection issue, etc, etc.

Hi I recently got a batterypack from a 2016 Outlander, which contains 80 of the Yuassa LEV40 cells. I will be

using 20 or 40 of them in an ATV conversion, but I have some trouble verifying the correct data on these cells. In a datasheet I found on secondlife-evbatteriesthe operational voltage...

Its a damn good gun, but back in those days Lithium wasn't really an option, and those Nickle Cadmium batteries it came with have faded away over the years. Surprisingly its lasted this long, so I guess those Japanese made batteries held up pretty well but one of the packs went completely dead.

2024??(Second Life)????????????? ...

Sanyo makes theirs in Japan (and are usually button top) and Panasonic makes theirs in China supposedly to the same specs but ...

Original cgr 18650 ce from Japan Specification 1. Minimum Capacity: 2250mAh (0.54A discharge at 20C) 2. Typical Capacity: 2100mAh (0.54A discharge at 20C) 3. Nominal Voltage: 3.6V 4. Discharge End Voltage: 2.5V 5. Standard Charging Current: 1.1A 6. Charging Voltage: 4.200.03V 7. Standard Charging Time: 4.0hours

Wolf, that's what I believed at first, but I'm pretty sure these are all non-Japanese and non-Korean cells. These are all probably produced by factories in China, Thailand, Singapore, etc. I have generic cells from 40 different manufacturers and counting. One thing I have noticed is the positive cap.

I don't have a way to easily compare \$ / benefits of Batrium vs JK BMS. A quick look at the JK web site (<https://>) doesn't give me enough details and I don't see pricing. Seems like a Bluetooth only interface?
