

What is eco Seido?

At Eco Seido, we believe in the promises of the sun. That it can bring hope. Change lives, Make the world a better place. Eco Seido is a renewable energy company with the expertise to develop, design, engineer, construct and operate projects across the globe towards our vision of creating a low energy, sustainable future for everyone.

What is Switzerland's energy strategy?

Switzerland's energy relies mainly on hydroelectric, nuclear, and natural gas, as well as imported petroleum for cars since Switzerland produces no fossil fuels. Launched in 2011, the 2050 Energy Strategy aims to shift towards sustainable energy practices, achieving climate neutrality and reducing reliance on fossil fuels.

Why is hydroelectric power important in Switzerland?

The high proportion of energy generated through hydroelectric power and the lack of natural resources (such as coal and oil) help to explain why such a situation is strategically beneficial in Switzerland. In 2017, Swiss voters accepted the revised Energy Act, endorsing the implementation of the 2050 Energy Strategy, which principally aims to:

What is Switzerland's wind power potential?

Switzerland's wind power potential is several TWh per year. The 2050 Energy Strategy aims to increase production from wind energy to 4.3 TWh a year, this would generate around 7% of the country's electricity.

What was the energy system like in Switzerland?

There are three different periods. An agrarian society until the mid-nineteenth century, Switzerland's small scale energy economy was based on wood and biomass (plants feeding the animal and human labour), which was in general renewable energy. Also used were wind power and hydraulic power, and, from the eighteenth century, indigenous coal.

How many hydroelectric power stations does Switzerland have?

In 2021, Switzerland operated 682 hydroelectric power stations, accounting for 62% of the nation's total electricity production. The country also maintains 220 dams, the highest density globally.

Seido Solutions provides integrated energy saving solutions for homes, businesses, manufacturers and cities. We aim to radically increase energy efficiency using advanced energy monitoring systems, cutting edge energy saving devices, quality LED lighting solutions and a comprehensive facility management service.

Switzerland has the lowest carbon intensity among IEA countries, owing to a carbon free electricity sector dominated by nuclear and hydro generation. However, following the 2017 decision of the Swiss people to phase out nuclear power, Switzerland's energy

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Energy turnaround Hydrogen Renewable energy Switzerland 13.12.2024 - A ground-breaking ceremony was held today by Axpo and its partner shareholders in the H2Uri company to mark the start of construction on a new green hydrogen production plant in Burglen, central Switzerland.
