

Emerging energy storage markets across Asia face a similar learning curve today as their maturing counterparts have done in the past. That was one of the key takeaways and themes of the Energy Storage Summit Asia 2024 (ESS Asia), which took place this week in Singapore and was hosted by our publisher, Solar Media.

Returning for its third edition in 2025, the Energy Storage Summit Asia remains the region's premier networking event for the energy storage industry. Building upon the success of previous years, our summit offers a unique platform for professionals ...

Emerging energy storage markets across Asia face a similar learning curve today as their maturing counterparts have done in the past. That was one of the key takeaways and themes of the Energy Storage Summit ...

In this rapidly evolving landscape, Energy Storage Summit Asia is your guide to this burgeoning market. Now in its second year, the Summit gathers independent generators, policymakers, banks, funds, offtakers, and cutting-edge technology providers and clarifies what successful energy storage procurement and deployment strategies look like.

Building fully integrated regional grids, long-distance transmission lines and grid-scale storage technologies is imperative for Southeast Asia so that countries can start capitalising on their clean energy potential without worrying about grid stability and variations.

World Energy Outlook 2024 Extended Dataset Includes more detailed information at regional and country-level for APS, STEPS across projected years (2030, 2035, 2040, 2045, 2050) as well as historical data (2010, 2022, 2023), ...

Battery energy storage systems: South-east Asia's key to renewable energy resilience. The game-changing technology presents an opportunity for the region to leapfrog traditional energy infrastructure limitations and embrace a sustainable future

There has been an uptick in energy storage investment in Southeast Asia, a region still largely powered by coal and experiencing high growth in population and energy demand. Andy Colthorpe speaks with ...

Overall, the energy storage capacity requirement in 2050 over the set wave power capacities is very similar to the full transition path in 2030. The required hydrogen storage for the eF-I scenario cluster first increases with more wave power added to ...

World Energy Outlook 2024 Extended Dataset Includes more detailed information at regional and country-level for APS, STEPS across projected years (2030, 2035, 2040, 2045, 2050) as well as historical data (2010, 2022, 2023), Advanced Economies aggregated figures for NZE, and WEO chapters figures, investments, fossil fuel prices, etc.

There has been an uptick in energy storage investment in Southeast Asia, a region still largely powered by coal and experiencing high growth in population and energy demand. Andy Colthorpe speaks with companies working to establish a framework of opportunities in the region.
