

How is shell expanding its solar power generation capability?

We are expanding our solar power generation capability by investing in the development and operation of long-term commercial and industrial solar projects. Shell provides renewable energy and low-carbon options through wind,solar,hydrogen and more. Learn more about our projects.

Why is shell incorporating solar energy into its portfolio?

As photovoltaic technology advances and production costs decrease,Shell is incorporating solar energy into its portfolio as customer choice drives the shift toward decentralised electricity. Sprng Sprng Energy is one of India's leading renewable power platforms,which supplies solar and wind power to electricity distribution companies in India.

Why is shell developing power projects?

Alongside providing the energy the world needs today,Shell is developing power projects to provide some of the lower-carbon energy that the world will need over the years ahead. In our power business,we bring together renewable power generation,trading and sales under a regional,integrated model.

How can we expand our solar power generation capability?

We are expanding our solar power generation capability by investing in the development and operation of long-term commercial and industrial solar projects,including at our own sites. At the end of 2021,our share of installed solar power capacity was 734 megawatts direct current (MWdc),with 1,484 MWdc under construction.

How much solar power does shell have in 2022?

In 2022,our share of installed solar power capacity was 1,914 MWac,with 340 MWac under construction. Figures exclude Silicon Ranch (Shell interest 44.3% as at the end of 2022,non-operated),the US solar power developer. Read more about solar power at

Which solar projects are in operation and under development?

Here is a selection of our solar projects in operation and under developement. Koegorspolder is Shell's sixth solar park in the Netherlands and the largest of the company in Europe, featuring more than 128,000 solar panels and having a peak capacity of 71.1 MW.

Learn more about Shell Scenarios. Shorter reports focused on the dynamics for energy and decarbonisation in specific places: from China to the EU, Indonesia to Singapore, the USA to India. We use two complex models of the world's ...

Our energy transition update shows how we are delivering against our climate targets. As we focus on areas of competitive strength, we are investing \$10-15 billion on low-carbon energy solutions between 2023 and the

end of 2025.

If the solar power, goes straight to your home and you are using exactly the amount that you are generating, you won't use any electricity from the grid at all. If your solar panels are generating ...
