How much power does a 400W solar panel get?

STC includes: 1000 watts per meter² of sunlight intensity, no wind, and 25 °C temperature. But in real-world conditions, on average, you'd receive about 80% of its rated power during peak sun hours. I ran a test and collected the 30 days of output data from my 400W solar panel system (in April).

What are the wattages of solar panels?

These wattages are measured at 1,000W/m², 25°C (77°F), and air density of 1.5 kg/m³. All the energy efficiency of solar panels (15% to 25%), type of solar panels (monocrystalline, polycrystalline), tilt angles, and so on are already factored into the wattage.

How much power or energy does solar panel produce will depend on the number of peak sun hours your location receives, and the size of a solar panel. Just to give you an idea, one 250-watt solar panel will produce about ...
