

Solar energy is harnessed from the sun's radiation and is converted to electrical energy to power electrical appliances. This is made possible using photovoltaic (PV) systems. Located near the equator, Singapore is one of the most solar-dense cities in the world.

The programme was launched in 2017 and is the first solar energy business model in Singapore that fully exports solar energy generated on the rooftops of buildings straight to the national power grid.

preventive maintenance works, and various incentives to promote solar PV systems in Singapore. We have also refreshed the presentation of the handbook to make it more accessible and reader- friendly, as well as to incorporate examples of completed solar PV installations in Singapore.

National Solar Repository of Singapore. Here you will find relevant information about the solar photovoltaic scene in the country, including systems description, meteorological information, solar industry contacts and much more. Be a part of the energy revolution of the future!
