

Small solar wind power generation system

What is a small wind energy system?

Small wind energy systems can be connected to the electricity distribution system. These are called grid-connected systems. A grid-connected wind turbine can reduce your consumption of utility-supplied electricity for lighting, appliances, electric heating and cooling, and vehicle charging.

Can wind power be used in a microgrid system?

Wind power can be used in isolated off-grid systems, or microgrid systems, not connected to an electric distribution grid. In these applications, small wind electric systems can be used in combination with other components -- including a small solar electric system -- to create hybrid power systems.

Are small wind electric systems a good investment?

If you have enough wind resource in your area and the situation is right, small wind electric systems are one of the most cost-effective home-based renewable energy systems -- with zero emissions and pollution. Small wind electric systems can: Help uninterruptible power supplies ride through extended utility outages.

Will a small wind electric system work for You?

Homeowners, ranchers, and small business owners can use wind turbines, like this Skystream 3.7 residential turbine, to reduce their utility bills. Photo from Southwest Windpower, NREL 15030 A small wind electric system will work for you if: It works for you economically. Small wind electric systems can contribute to our nation's energy needs.

Can a small wind energy system provide a practical and economical source of electricity?

A small wind energy system can provide you with a practical and economical source of electricity if: Your property has a good wind resource. Your home or business is located on at least 1 acre of land. Your local zoning codes or covenants allow wind turbines. You can determine how much electricity you need or want to produce.

What is a wind electric system?

A wind electric system is made up of a wind turbine mounted on a tower to provide better access to stronger winds. In addition to the turbine and tower, small wind electric systems also require balance-of-system components. Most small wind turbines manufactured today are horizontal-axis, upwind machines that have two or three blades.
