## Solar Thermal Energy Storage Molten Salt

What is molten salt storage in concentrating solar power plants?

At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWh el. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power plants and electrical energy storage.

How molten salts are used in solar power plants?

Most of the operational plants have integrated a storage unitusing molten salts as the storage media, one uses combined steam/oil (Dahan Power Plant), another just steam (Khi Solar One) and one a ceramic heat sink (Jü lich Solar Tower).

Are molten salts a thermal energy storage material?

Molten salts as thermal energy storage(TES) materials are gaining the attention of researchers worldwide due to their attributes like low vapor pressure,non-toxic nature,low cost and flexibility,high thermal stability,wide range of applications etc.

Can molten salts be used in solar and nuclear TES?

This review presents potential applications of molten salts in solar and nuclear TES and the factors influencing their performance. Ternary salts (Hitec salt, Hitec XL) are found to be best suited for concentrated solar plants due to their lower melting point and higher efficiency.

What is molten salt storage research?

Molten salt storage research topics on CSP system level. Molten salt storage sets the commercial standard in CSP plants at the time of writing. Major indicators to evaluate and compare storage systems are the capital cost of the TES system and the LCOE. Several other TES technologies are developed for CSP.

Can molten salt storage be used as a peaking power plant?

Drost proposed a coal fired peaking power plant using molten salt storagein 1990 112. Conventional power plant operation with a higher flexibility using TES was examined in research projects (e.g.,BMWi funded projects FleGs 0327882 and FLEXI-TES 03ET7055).
