

Do solar lights need brackets?

Brackets are almost always required for solar lighting installations. This is because the solar is almost always mounted to the top of the pole and the fixture needs to be mounted lower on the pole. The fixture bracket allows the fixture to mount directly to the same pole and out away from the pole at times.

What is a solar street light fixture?

A solar street light fixture is a particular fixture that operates off DC power. Most manufacturers have their line of fixtures and do not work with fixtures outside their main line. This is because extensive testing has been completed, and warranties exist for all components.

How do you mount outdoor solar lights?

Some outdoor solar lights mount like traditional light fixtures, using screws, including our best wall-mounted pick, the Better Homes & Gardens Solar Dusk to Dawn Decorative Outdoor LED Light.

How does a solar lighting controller work?

The controller acts as a gateway for the solar lighting system. It tells the batteries when they should be taking on the charge provided by the panels. It then will tell the batteries to operate the fixture when the panels stop producing power.

What are the best string lights for outdoor space?

These typically have a solar panel that needs to be placed where it can receive a good amount of sun daily. For example, the Brightech Solar LED String Lights, our best string lights pick, can provide ambiance to your outdoor space all year long. Hanging lights are also super easy to install and versatile within your outdoor space.

What size poles do I need for a solar light system?

The poles provided for standard light applications are quite different from what is provided for a solar lighting system. Solar poles are typically very large, with a 4-6" tip and an 8-14" base, and should always be round. Square poles do not allow for mounting the solar and fixture in any direction and tie you to four direction orientations.
